Describe

In this challenge, the title gives the daily sales volume of three products of two stores in three different countries from 2015 to 2018, and asks us to predict their sales volume in the next year.

Seasons and weekends will affect sales.

The country’s GDP will also have an impact on sales.

Defn

To sum up, we can find that there are three countries, two stores and three products, so there will be 18 combinations. The training data covers 2015-2018, and the test data requires us to predict 2019. There is no missing value in training data and test data. Next, we will analyze the data by viewing the chart.

Conclusion

Defn

From the above chart, we can see that the sales volume of each product at the end of each year is much higher than the average, and the sales volume of **Kaggle Hat and Kaggle Mug** seems to have seasonal characteristics, while the sales volume of Kaggle Sticker does not see obvious seasonal changes, so we should consider adding **Fourier characteristics** for Kaggle Hat and Kaggle Mug.

■ Analysis Chart

- ◆ Observe the phenomena in the chart and draw corresponding conclusions

Phenomena

- ◆ The monthly fluctuations in different years of the same portfolio are similar.
- ◆ The sales volume in most portfolios is increasing year by year.
- ◆ Norway’s sales are not increasing year by year.

Conclusions

- ◆ The sales volume of each month is seasonal.
- ◆ The annual sales volume is related to other factors (the guess is GDP)

Defn

From the Sales per day of the week, we can see that the sales volume on the weekend is higher than that on the weekday, which means that the week also has seasonal characteristics. For such a short period of time, we should consider adding **seasonal indicators**.

Defn

Because the structure of the data set is not very complex and there are few influencing factors, the linear regression model is selected for this model, and the method of combining time series with linear regression model is used. Add some elements of time series, such as Fourier characteristics, seasonal indicators, and real world GDP data.

- GOAM Algorithm
- Step One - Group Feature Extraction
- Step Two - Outlying Degree Scoring
- Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

■ Suppose f_1, f_2, f_3 are three features of G_q .

$f_1: \{x_1, x_2, x_3, x_4, x_5, x_2, x_3, x_4, x_1, x_2\}$

$f_2: \{y_2, y_2, y_1, y_2, y_3, y_3, y_5, y_4, y_4, y_2\}$

$f_3: \{z_1, z_4, z_2, z_4, z_5, z_3, z_1, z_2, z_4, z_2\}$

Figure 15: Histogram of G_q on three features

Step Two - Outlying Degree Scoring

- Problem Description
- Data Clean
- Method analysis
- Data processing
- Model Training
- Related Work and Challenges
- GOAM Algorithm
- Step One - Group Feature Extraction
- Step Two - Outlying Degree Scoring
- Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

- Calculate Earth Mover Distance
 - ◆ Represent one feature among different groups
 - ◆ Purpose: calculate the minimum mean distance

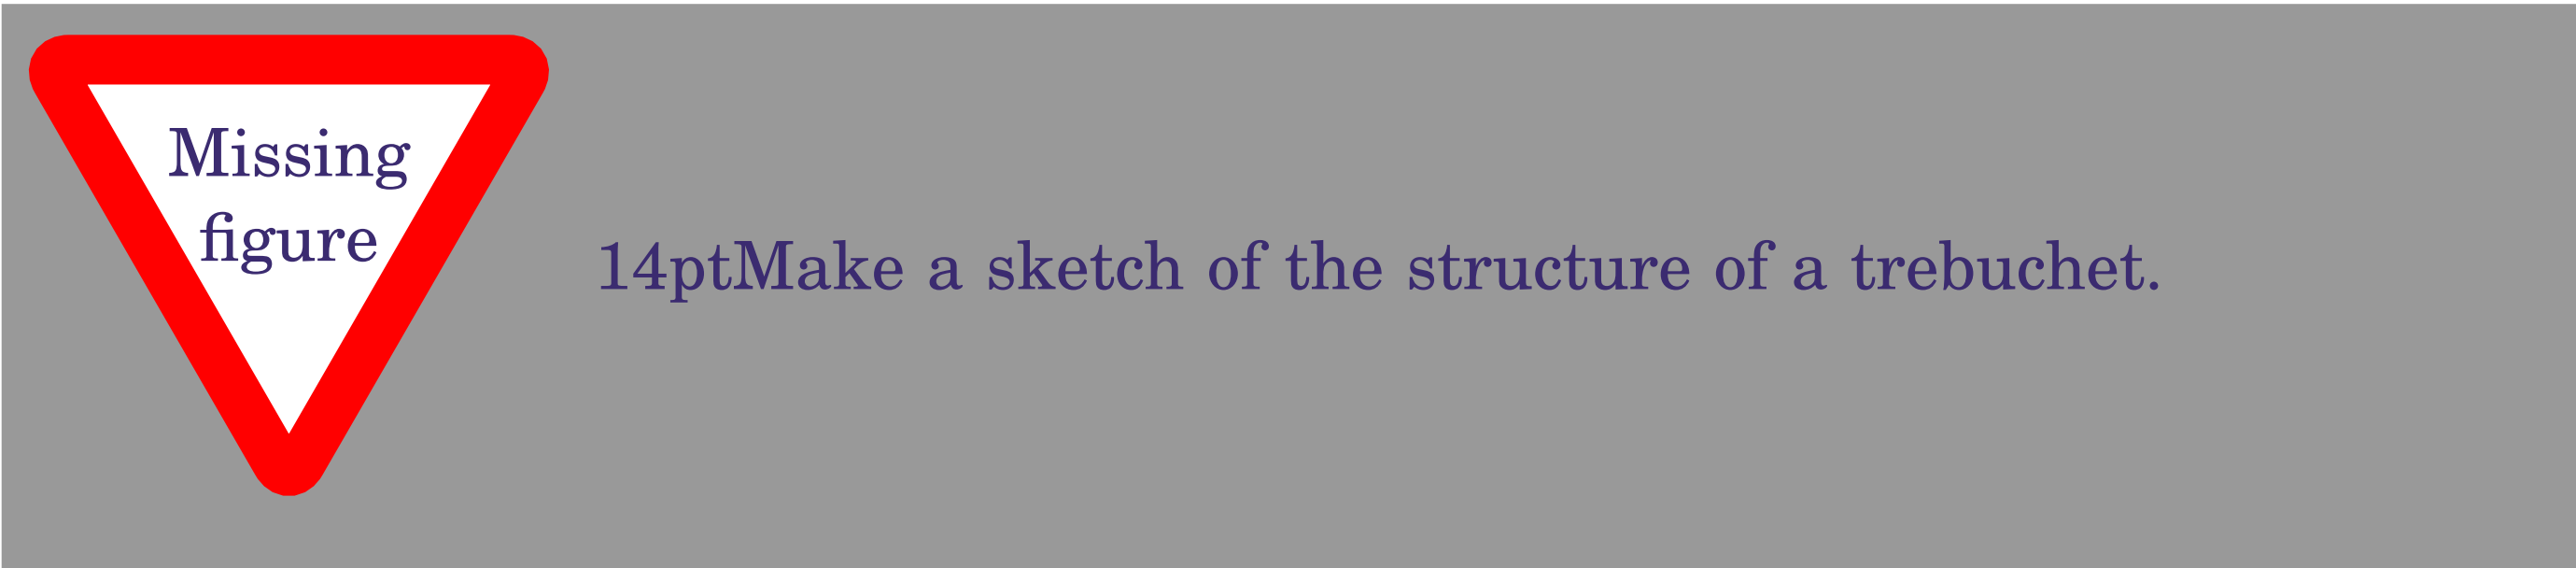

Figure 16: EMD of one feature

Step Two - Outlying Degree Scoring

- Problem Description
- Data Clean
- Method analysis
- Data processing
- Model Training
- Related Work and Challenges
- GOAM Algorithm
- Step One - Group Feature Extraction
- Step Two - Outlying Degree Scoring
- Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

- Calculate the outlying degree

$$OD(G_q)=\sum_1^n EDM(h_{q_s},h_{k_s})$$

- ◆ $n \Leftrightarrow$ the number of contrast groups.
- ◆ $h_{k_s} \Leftrightarrow$ the histogram representation of G_k in the subspace s.

Step Three - Outlying Aspects Identification

- [Problem Description](#)
- [Data Clean](#)
- [Method analysis](#)
- [Data processing](#)
- [Model Training](#)
- [Related Work and Challenges](#)
- [GOAM Algorithm](#)
- [Step One - Group Feature Extraction](#)
- [Step Two - Outlying Degree Scoring](#)
- [Step Three - Outlying Aspects Identification](#)
- [Evaluation Results](#)
- [Conclusion](#)

- Identify group outlying aspects mining based on the value of outlying degree.
- The greater the outlying degree is, the more likely it is group outlying aspect.

Table 2: outlying degree of each possible subspaces

Feature	Outlying Degree	Feature	Outlying Degree
$\{F_1\}$	4.351	$\{F_2, F_3\}$	4.023
$\{F_2\}$	2.012	$\{F_3, F_4\}$	4.324
$\{F_3\}$	1.392	$\{F_2, F_4\}$	2.018
$\{F_4\}$	2.207	$\{F_2, F_3, F_4\}$	2.012

■ Search process:

$OD(\{F_1\}) > \alpha$, save to T_1 .
 $OD(\{F_2\}) < \alpha$, save to C_1 .
 $OD(\{F_3\}) < \alpha$, save to C_2 .
 $OD(\{F_4\}) < \alpha$, save to C_3 .

$OD(\{F_2, F_3\}) > \alpha$, save to N_1 .
 $OD(\{F_3, F_4\}) > \alpha$, save to N_2 .
 $OD(\{F_2, F_4\}) < \alpha$, remove.
 $OD(\{F_2, F_3, F_4\}) < \alpha$, remove.

Strengths of GOAM Algorithm

- Problem Description
- Data Clean
- Method analysis
- Data processing
- Model Training
- Related Work and Challenges
- GOAM Algorithm
 - Step One - Group Feature Extraction
 - Step Two - Outlying Degree Scoring
 - Step Three - Outlying Aspects Identification
- Evaluation Results
- Conclusion

- Reduction of Complexity
 - ◆ Bottom-up search strategy.
 - ◆ Reduce the size of candidate subspaces.
- Efficiency
 - ◆ Before: $O(2^d)$
Now: $O(d * n^2)$

Conclusion

Conclusion

- Problem Description
- Data Clean
- Method analysis
- Data processing
- Model Training
- Related Work and Challenges
- GOAM Algorithm
- Evaluation Results
- Conclusion

- Formalize the problem of *Group Outlying Aspects Mining* by extending outlying aspects mining;
- Propose a novel method **GOAM algorithm** to solve the *Group Outlying Aspects Mining* problem;
- Utilize the pruning strategies to reduce time complexity.
